Software Test Engineer (Product Development)

Position Summary:

Design state-of-the-art medical devices in an exciting and fast-paced development environment.

You will work with developers, product owners, and other team members to develop software testing strategies and raise any issues with feature design, determine proper testing needs for ongoing releases, write detailed test cases, ensure bugs are identified early and fixed and act as gatekeeper for product releases.

This position is focused on developing test plans, test cases and acceptance tests to ensure successful product release and deployment. You will be working alongside product developers to refine the requirements and develop test strategies that demonstrate product readiness for the field.

Requirements:

- Desire in test creation, unit, white and black box testing.
- Strong interest in test case generation and bug tracking.
- Programming experience in C#/.NET or similar language.
- Highly motivated and excellent problem-solving skills.
- BS degree in Computer Science or equivalent.

Responsibilities include:

- Test planning and case development for product features to ensure complete requirements to test matrix coverage.
- Document and communicate test reports, defect analysis, and risks.

We will not be considering applications for remote employment or telecommuting.

Come play a leading role in the growth of Cadwell Laboratories, Inc., a world-renowned medical equipment leader. Join Cadwell and be a part of the team that makes ideas come to life!
